## Projects

---

### React.Js Projects:

**AO Admin:** This project is used for publishing seminar and the workshop to make user understand that how its plan will work after retirement. This module is for the administration to manage Communication, Partners, and Subscriptions.

**Intake Form:** This project is for getting complete details of people related to Health, Finance, Legal Information, Housing Information, Document Uploads which help the elderly people to make retirement plans.

**Universal Login:** This project used for signIn and Signup the client and staff.

**Funnel Management:** This project is for managing and registering the seminar and workshops which was created in AO-Admin.

**Counter Planning:** In this project people who are attending seminar can check in by self or by staff member. For paid seminar we also have a payment gateway integrated.

**Paralegal:** In the paralegal module, our legal staff manages client data and uploads legal files. They can also assist clients in filling out the information in the intake form.

**Agent Module :** In the agent module, clients' agents (such as family members or friends) can log in to the system when the client is in the last stage of life, experiencing illness, or in old age. The purpose of this module is to allow agents to inform the client's family and professional users about the client's situation .
